PRODUCT DATA SHEET

Engage™ 2013

A POWERFUL SUITE OF TOOLS THAT EXTENDS THE EFFICIENCY AND ANALYTICAL CAPABILITIES OF MAPINFO PROFESSIONAL®

Product Overview

The release of the Engage 2013 Suite from Pitney Bowes Software showcases the ongoing innovative developments that have made the Engage Suite the 'must-have' application for GIS users worldwide. This release allows the reprojection and clipping of both very large raster and ECW imagery, as well as support for the Windows 8 operating system.

Added Value

Import

The Engage application extends the data handling capabilities of MapInfo Professional, with read and write support for over one hundred industry standard tabular, vector and raster image data formats. These include advanced functionality such as image rectification and reprojection, direct ECW and ALG import, and extensive vector import and conversion capabilities (such as .GPX and Google Earth .KML).

Analyse

A detailed analysis and understanding of all aspects of your datasets can add significant value to the resulting interpretations and modelling. The Engage application provides an extensive array of advanced analytical functionality at your fingertips, allowing varied datasets to be assessed dynamically in statistical, spatial, temporal and graphical views. This may range from demographic distributions, sales trends, incident occurrences, etc.

Engage's analytical tools can help distinguish trends and anomalies in multivariate data acquired from multiple sources. Just as importantly, these tools will assist in identifying and eliminating false anomalies that can arise from sampling and assaying errors or bias, with options such as data conditioning, null handling, and data normalisation.

EXPECTED ROI

- Efficient control of your workspace, including map window tools and advanced selection options
- Powerful real-time data visualisation and interaction
- Fast map output - both scaled and customised
- Simple and accurate image rectification at your fingertips
- Valuable temporal analytics enable exploration of the 4th dimension to uncover data trends in hard-to-find places.

Pitney Bowes Software

Productivity

Engage provides a rich set of productivity tools that will enhance the experience of any MapInfo Professional user. This enhanced set of layer, window, object, table, and data tools comprises a multitude of short-cuts and useful new functions which make complex and repetitive tasks easy to perform, many with batch processing capabilities. Once you've used the productivity tools in Engage, you'll wonder how you ever survived without them.

Digitise

The Engage application simplifies the digitising of area usage polygons (for example flora mapping) by intelligently converting linework into attributed polygon vector objects. Engage automatically checks and cleans the linework, resolving gaps, overlaps, and loops, and streamlines the process of adding attributes to the resulting polygons.

Engage can also auto-increment integer attributes (e.g. sample numbers) during digitisation, as well as auto-fill text or numeric attributes, and prompt for other location-specific data.

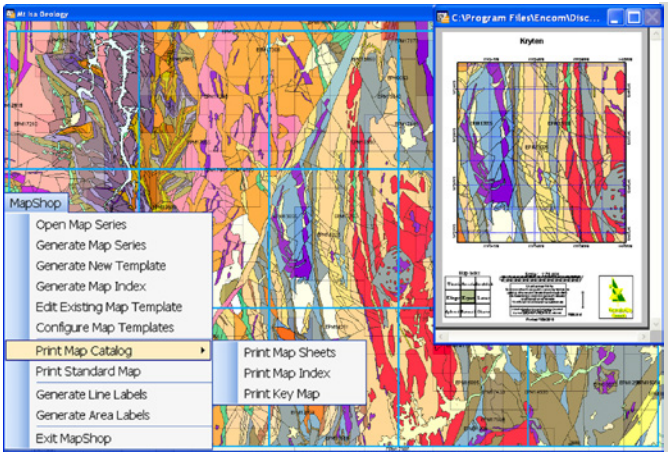
Map Making

Use the Engage application to easily create a series of map sheet boundaries over a region and automatically batch print an entire map series onto pre-defined templates. Items such as map name, map number, date, scale, etc are automatically updated on each map. Location indexes can be automatically generated to assist with generation of map books such as street directories.

PRODUCT DATA SHEET

NEW FEATURES

- Supports MapInfo Professional® v12.0
- Supports Windows 8
- Large raster images (>200MB) as well as high resolution ECW imagery can now be reprojected and clipped with ease.



Batch create and print a series of similarly themed maps using fully customisable layout templates.

Specifications

- Engage 2013 requires MapInfo Professional version 10.5 or later.

Supported Operating Systems:

- Windows® XP Professional 32-bit Service Pack 3 (SP3)
- Windows® 7 SP1 32-bit or 64-bit
- Windows® 8 32-bit or 64-bit
