

DATA SHEET

Australian Mineral Tenements

SUBSCRIBE TO A REGULARLY UPDATED AUSTRALIAN MINERAL TENEMENT DATA SERVICE.

Benefits

- Updated regularly
- No more dealing with multiple agencies
- Formatted to work directly with the Encom Discover tenement module
- Consolidated dataset
- Choose individual states or the entire country
- Download directly from the Pitney Bowes Business Insight server to your desktop in WFS format

OVERVIEW

Pitney Bowes Business Insight (PBBI, formerly Encom Technology Pty Ltd) provides an online subscription service for Australia-wide mineral tenement data that is hosted and delivered via an online PBBI server and accessed from the tenement module within Encom Discover.

Encom Discover is the desktop Geographical information System designed for the geosciences, providing tools to effectively compile, visualise, analyse and map spatial geoscience data.

Encom Discover Tenement Module

The Discover tenement module has been completely re-designed in version 11.0, to provide an interactive interface for creating new applications, searching through existing tenement data and for downloading regular tenement updates for the country. Utilising the PBBI mineral tenement data, it is very easy to:

- Perform straightforward tenement queries
- Create polygonised block and sub-block reference grids
- Create new or modify existing tenement applications
- Create tenement application reports

Subscription Details

Before using this service, you must subscribe and obtain a user name and password.
